

Public / Private

Web as a Public and Private space.

Computer and network surveillance

- The monitoring of computer activity and data on a hard drive or computer networks.

- Maintain social control, monitor threats, and prevent and investigate criminal activity.

- Legality is blurred.

- Almost all Internet traffic can be monitored.

9-eyes.com

In 2008, Jon Rafman began to collect screenshots of images from Google Street View.

“...Without apparent concern for ethics or aesthetics, from a supposedly neutral point of view.”

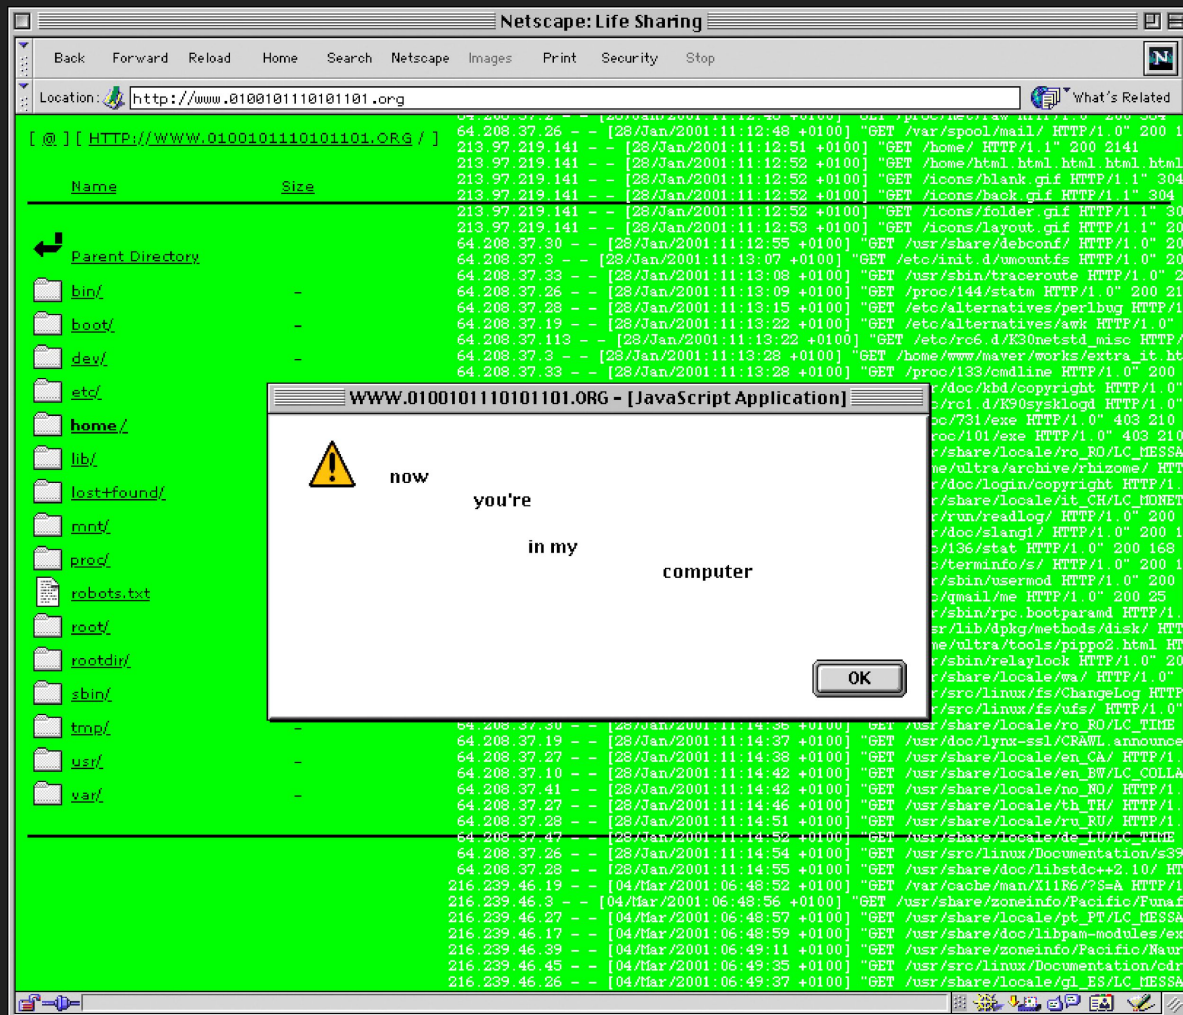

Life Sharing by Eva and Franco Mattes

In 2000, the couple made the contents
of their home computer accessible to
the public.

All of the contents were available in
real time.

Also wore [GPS transmitter](#).

 SHOULD
 NOT BE A
 CRIME

Conversnitch

2013 - [Brian House](#) and Kyle McDonald

Conversnitch automatically tweets overheard conversations, bridging the gap between (presumed) private physical space and public space online.

JenniCam

Jennifer Ringley started a website which would update with an image of her dorm room every 15 minutes, 24 hours a day, 7 days a week.

Average people are worth watching and learning from, too.

Programming challenge —> art project.

Fooling a Person Detector

A team of machine learning researchers from Belgian university KU Leuven think not, and have introduced a simple hack that can enable people to circulate undetected by AI-powered surveillance cameras
